

## Redlair Fungal Collections

Collected: 7-17-08

*Amanita caesarea* (the orange one Haywood found)

*Amanita cokerii* (the big white ones)

*Amanita polypoamis* “ “ ‘)

*Boletus bicolor* (considered a good edible but Orson Miller reports some gastrointestinal upsets)

*Boletus frostii* (the one with blood red pores)

*Boletus variipes* (in the steinpiltz group and should be a choice edible)

*Lepiota seminuda* (first time I have seen it – the white ones in the dead tree)

*Russula* (close to *brunneola*)(gray one in lawn)

*Trametes versicolor* (the tough bracket on the log)

*Tylopilus indecicus* (the chocolate brown with white pores)

Collected but did not preserve”

*Entoloma species*

*Boletus ornatipes* (the mustard colored one)

Another *Russula*

*Cantharellus cinnabarnius*

Saw but did not collect:

*Amanita bisporigera* (the death angel)

*Pluteus cervinus* (growing on the log with pink spores)

Other *Russulas* and *Entolomas*

*Inocybe* (in lawn.. our first stop)

Those mycorrhizal with trees and other vegetation: *Amanita*, *Boletus*, *Tylopilus*, *Russula*, *Inocybe*, *Cantharellus*

Decomposers: *Entoloma*, *Pluteus*, *Trametes*, *Lepiota*
